

*If I have seen farther, it is by
standing on the shoulders of giants.*

-- Sir Isaac Newton

1. Oxford College and Liberal Arts. Oxford College is dedicated to a liberal arts education, and science, including chemistry, is an integral part of the liberal arts. In this course, you will have an opportunity to master these liberal arts skills:

- Reasoning:

1. Problem-Solving
2. Critical Thinking
3. Logic
4. Calculation/Computation
5. Investigation
6. Analysis of data

- Language

1. Listening and interpreting
2. Reading
3. Writing

- Aesthetics

1. Observing
2. Seeing relationships among form, pattern, harmony, and shape

- Imagination

1. Prediction
2. Developing scientific insight (hypotheses)

2. Learning Goals. The primary learning goals for this class are for you to:

- Utilize critical thought and reasoning to understand chemical behavior at the microscopic and macroscopic levels.
- From your knowledge of chemistry and chemical systems, be able to develop solutions to problems which you have not encountered before.

3. Content goals. You will be expected to master these areas of chemistry (for a more detailed list of the content, see the class LearnLink conference):

- Coordination compounds and crystal field theory
- Intermolecular forces
- Phase diagrams
- Concentration units
- Factors affecting solubility
- Colligative properties
- Kinetics, including rates of reaction and reaction mechanisms
- Equilibrium, including LeChatlier's Principle
- Acids, bases, buffers
- pH and titrations
- Solubility equilibrium
- Entropy and free energy
- Electrochemistry, including electrochemical cells and electrolysis
- Nuclear chemistry (time permitting)

4. Materials. "Chemistry" 9th ed., by Ebbing and Gammon (including study guide).

Scientific calculator. You will find it impossible to work problems without a scientific calculator. Calculators which can download and/or store information, which can automatically solve equations, or which can be programmed, are not allowed.

For lab: Laboratory manual.

If you did not take Chemistry 141 at Oxford in Fall 2008, you will be given a copy of this year's laboratory manual and the cost will appear on your college bill. This includes students with AP credit, students who took Chem 141 at another school, students who took Chem 141 in an earlier semester here, and students who took Chem 141Z in the fall.

Carbon-copy lab notebook.

Safety glasses.

You must have all three materials for lab before your first lab meeting.

5. Attendance. All students are expected to attend all lecture and laboratory sessions. However, it is recognized that emergencies may arise which may necessitate absences from class.

You should notify me if an absence is due to illness or other emergency. You are responsible for all material covered in lecture if absent.

You are allowed 3 absences in lecture and NO ABSENCES in lab.

If you exceed the 3 absence limit in lecture for whatever reason, you will lose 1 point for the next absence (number 4), 2 points for the next absence (number 5), and 3 points for each additional absence (numbers 6 and up). These points will be deducted from the final course average. Note that there are no “excused” absences.

Make-up exams are not given, regardless of the reason an exam was missed. If you miss an exam and present me with an acceptable excuse, the grade on the final exam will count in place of the missed exam grade. You must notify me by the day and time of the exam that you will not be present and you must give me the reason for the absence. If the excuse is not considered acceptable, the exam grade will be a zero. It is up to me as the instructor to make the determination as to whether an excuse is acceptable. In general, illness or an emergency situation are the only acceptable excuses for missing an exam. Missing an exam also counts as an absence in the course.

Being late to class is rude and distracting. Therefore, 3 tardies will be considered equal to 1 absence. If you come in more than 15 minutes tardy, you will be counted absent. If you come in late, it is your responsibility to see me immediately after class to ensure that you are marked tardy and not absent. No adjustments will be made at a later time. If you are continuously tardy, you may be excluded from further classroom attendance. When you are in class, you must be attentive and not disturb others. Leaving a class early counts as an absence, as does sleeping through a class or being generally inattentive.

In class, you should be concentrating on learning. Anything that distracts from this is contrary to the educational process. Therefore, cell phones and pagers are not allowed in class. Should you bring one and it goes off, or should you use it in any way, you will leave the class and be counted absent. If this happens a second time, you may not return to class. For the same reason, food and drink should not be brought to class.

6. Problems. At the end of each chapter, there are problems which you should work to help you in understanding the material. These problems are for your benefit only; they will not be taken up or graded. Since general chemistry is a problem-oriented course, and the tests will consist mainly of problems, it is essential that you become proficient in working problems such as those found at the end of the chapters. You should work problems as you encounter the material. You should also attempt each problem before seeking help from the book, your notes, or the answer. It is not sufficient to be able to follow how a problem is worked; on a test, you will have to work a problem all the way through, and the only way you will be able to do this is if you have worked numerous practice problems.

7. Tests. There will be 4 exams, given approximately every 3-4 weeks. These will be given in class. Each exam will last 55 minutes. Other than your own calculator and pen or pencil, you may use only the materials and data provided with the exam. Any material you bring with you, such as books, book bags, papers, notebooks, scratch paper, etc., must be left at the front of the room. You may not have a cell phone or any electronic device at your desk. Make sure your calculator is one which is allowed (see Materials, above), that it is working, and that you know how to use it. Calculators will not be loaned or shared. You must take the exam during your regular class time. If you come in late, you will not be given extra time to finish the exam. The honor code applies to all exams.

Each exam will also include an essay; this must be word-processed and double-spaced, using 12-point type and black ink. The essay must be printed – electronic submission is not acceptable – on one side of the paper. If more than one page, the pages must be stapled. Essays that are hand written, essays not double-spaced, and essays not submitted in printed form are not acceptable. The topic will be posted 4-7 days in advance on the class LearnLink conference. The essay must be turned in when you come to take the exam. Part of your grade on the essay will be based on your writing -- grammar, spelling, and punctuation. You should run a spell checker and proof-read. For the essay, you may use your book and notes, but giving or receiving assistance from any person is an Honor Code violation. You are strongly encouraged to have someone not in your chemistry class proof-read your essay for its writing (but not for its content).

Oxford College has adopted as part of its Mission Statement that its curriculum is designed to teach students to "embrace responsible citizenship." In addition, as part of its Purpose Statement, the College lists "to augment the student's ... intellectual awareness of the world". To encourage you to become aware of the world around you, most exams will have a bonus question on "current events."

8. Honor Code. It is assumed that all Oxford College students will adhere to the highest standards of academic honesty and will uphold the Oxford College Honor Code. Accordingly, I do not proctor exams unless I have reason to believe the Honor Code is being violated.

On exams, you may not use any material not distributed with the exam itself except for a calculator and pencils/pens. Any other material you bring into the room must be left at the front of the room, including a cell phone or other electronic device. During an examination, you may not give or receive assistance. On assignments for outside class (essays, lab reports), the work is to be your work alone – you may not give or receive any assistance, and you may use only materials authorized. Since absences and tardies can affect your grade, giving false information regarding absences or tardies is a violation of the Honor Code. Note also that the Oxford College Honor Code expects students to report any violations of the Code they know of. See the Honor Code Pledge handout for more information.

9. Exam schedule.

Exam I	Friday, Feb. 6
Exam II	Friday, Feb. 27
Exam III	Wednesday, Apr. 1 and Friday, Apr. 3
Exam IV	Friday, Apr. 24

Note that Exam III will be given in two parts – for the first part you will have 25 minutes on Apr. 1 and for the second part you will have the entire class period on Apr. 3.

Exams may be moved forwards or backwards as necessary; this will be announced in class and on the class LearnLink conference.

10. Final Exam. There will be a final exam, covering the semester's material. This will be given during the regularly scheduled final exam period. Final exams are not returned.

11. Schedule.

Chapter 22, sections 3 and 7

Chapter 11

Chapter 12

Chapter 13

Chapter 14

Chapter 15

Chapter 16

Chapter 18

Chapter 19

Chapter 20

The sections covered for each exam will be announced in class.

12. Review sessions. A review session will be held before each exam; the date and time will be announced in class. If held outside of class, these sessions are optional and voluntary; no new material will be covered. If held in class, attendance will count as it would for a regular class session, since the review normally will not take the entire class period.

13. Laboratory. At your first lab meeting, I will explain the lab procedures to you. The lecture and laboratory are designed to coordinate so that you will have covered material in class before being required to use that material in lab. Note under Grading below, how your lab average affects your course grade.

14. Office Hours. My office is Pierce 217. I am usually in my office and available from 9-5 every day. Exceptions are around lunch time (11:30-1:00) and during class and labs.

15. LearnLink. You are expected to read the class LearnLink conference (Chem 141-142 Parker) regularly, as well as any subconferences within it. You are also expected to check your LearnLink e-mail regularly. Failure to read a message sent to you or to the class conference is not an acceptable excuse for your action or inaction.

16. Grading. The final will count as two exam grades. The lowest grade of Exam II, Exam III, and Exam IV will be dropped. The average of the remaining 5 grades (the grade for Exam I; the two highest grades among Exams II, III, and IV; and 2 times the final grade) will constitute the lecture portion of your course grade.

Your lab grade will count in one of two ways, whichever results in a higher grade:

(1) Your course grade will be computed by adjusting your grade on the lecture portion using your lab average as shown below. This method normally benefits students whose exam average is a high B or an A; it only applies to those with lab averages above 90.

Lab average	Lecture grade adjustment
90 to 92.9	+1
93 and up	+2

----- **OR** -----

(2) Your course grade will be 80% times your lecture grade and 20% times your lab grade. This method usually benefits students whose exam average is a B or lower.

17. Grading scale. Grades are normally assigned as follows:

93 - 100 A	77 - 79 C+
90 - 92 A-	73 - 76 C
87 - 89 B+	70 - 72 C-
83 - 86 B	67 - 69 D+
80 - 82 B-	60 - 66 D
	below 60 F

Your exam average AND your lab average must both be passing or you will receive a grade of F in the course regardless of your final numerical average. Grades are assigned based on your performance in the course (exams, lab, attendance) and are not open for discussion after being assigned. There is no automatic rounding. If you are on a border, consideration is given to attendance, improvement, and class participation.

18. Special note. If you did not make at least a C in Chemistry 141, you will have a difficult time in this course and will probably make a D or F. You should sit in on Chem 141 for review (or retake the class once you're at Emory College) before taking Chemistry 142.
