Course Outline for BIO 7C

MICROBIOLOGY

Effective: Spring 2019

I. CATALOG DESCRIPTION: BIO 7C — MICROBIOLOGY — 5.00 units

This course focuses on viruses, bacteria, fungi, protozoans, and helminths, with an emphasis on their relationship to humans. Cultivation, control, metabolism, body's defense against disease, microbial genetics, laboratory tests, and contemporary diseases are discussed. Methods used in the laboratory include standard bacteriological techniques (culturing, staining, biochemical testing, sensitivity testing etc.) as well as some molecular and immunological techniques, such as PCR and ELISA. Laboratory work also includes identification of unknowns, and/or independent research projects.

3.00 Units Lecture 2.00 Units Lab

<u>Prerequisite</u>

BIO 30 - Intro to College Biology with a minimum grade of C

CHEM 30A - Intro and Applied Chemistry I with a minimum grade of C

CHEM 1A - General College Chemistry I with a minimum grade of C

Strongly Recommended

BIO 7A - Human Anatomy with a minimum grade of C

ENG 1A - Critical Reading and Composition with a minimum grade of C

Grading Methods:

Letter Grade

Discipline:

Biological Sciences

	MIN
Lecture Hours:	54.00
Expected Outside of Class Hours:	108.00
Lab Hours:	108.00
Total Hours:	270.00

- II. NUMBER OF TIMES COURSE MAY BE TAKEN FOR CREDIT: 1
- III. PREREQUISITE AND/OR ADVISORY SKILLS:

Before entering the course a student should be able to:

- A. BIO30 B. CHEM30A
- C. CHEM1A

Before entering this course, it is strongly recommended that the student should be able to:

A. BIO7A

- speak and write using anatomical terminology
 identify organizational levels of the body and explain how they are related
 identify cellular organelles and relate the cellular organelles to the function of a variety of cell types

- 4. give the structure, function, and location of body membranes
- identify the structures and describe the function of the integumentary system
- list the structural and functional divisions of the nervous system and describe the microscopic structure of a typical neuron
- 7. identify and describe the anatomy of the brain and spinal cord 8. identify components of blood and list their functions
- dentify the organs of the cardiovascular system, and describe the anatomy of the heart and blood vessels
 describe the structures and functions of the respiratory system
- 11. describe the structures and functions of the organs and accessory organs of the digestive system
- 12. describe the gross anatomy and functions of urinary organs and the microscopic structure of the nephron 13. describe the structures and functions of the male and female reproductive systems

B. ENG1A

- Critically read texts and materials from a variety of academic and cultural contexts, demonstrating in writing and discussion the ability to:
 - a. Summarize a thesis and main points;
- a. Summarize a thesis and main points;
 b. Analyze main ideas;
 c. Evaluate the validity and logic of the text's reasoning and support;
 d. Create a coherent position or argument based on reading;
 2. Write multiple-paragraph papers that:

 a. Accurately and appropriately respond to a given assignment;
 b. Develop a relevant, focused thesis;
 c. Are well-organized and coherently move from coordinating to subordinating points;
 d. Are well-developed with sufficient and relevant evidence;
 e. Synthesize facts and ideas originating outside his/her direct experience to develop and support a thesis;
 f. Use standard American English correctly;

 3. Research a specific topic using the Internet, databases, journals, and books demonstrating an ability to:

 a. Review sources for relevant evidence and arguments;
- - a. Review sources for relevant evidence and arguments;
 - b. Integrate researched material into his/her own writing with appropriate context, explanation, punctuation, and citation;
 - Document sources in an academically responsible way.

IV. MEASURABLE OBJECTIVES:

Upon completion of this course, the student should be able to:

- A. Describe critical discoveries and events in the history of Microbiology and discuss the significance of this work;
- Compare and contrast prokaryotic and eukaryotic cellular structure and function;
 Conduct procedures to isolate, cultivate and identify bacteria;
 Apply aseptic technique and handle microorganisms in a safe manner;

- E. Identify common protozoans, cestodes, and nematodes that parasitize humans, know the diseases they cause, and describe select life cycles;
- Identify arthropod vectors of disease and discuss select major arthropod borne diseases;
 Recognize and describe selected pathogenic viruses and fungi and discuss associated diseases;
 Describe and perform selected techniques used in genetic engineering;
 Explain how the human body defends itself against disease;

- J. Describe the theory and interpretation of common serological and molecular clinical laboratory tests, then utilize selected tests;
 K. Demonstrate proficiency using the compound light microscope;
 L. Explain the use of disinfectants, antiseptics, sanitizers and the mode of action of selected examples;

- M. Discuss various selected mechanisms of antibiotic and antiviral sensitivity and conduct and interpret antibiotic sensitivity testing; N. Apply and interpret selected bacterial staining methods and recognize shapes, arrangements, and morphological structures of
- Utilize and interpret complex selective and differential media and various biochemical tests commonly used for bacterial identification;
- P. Review, differentiate, and categorize various selected infectious diseases;

V. CONTENT:

- A. Lecture

 - Fundamentals of Microbiology
 a. Introduction to microbiology, including history, naming and classification.
 - b. Functional anatomy of prokaryotic and eukaryotic cells
 - c. Microbial growth
 - d. Control of microbial growth
 - Microbial metabolism
 - **Bacterial genetics**
 - g. Biotechnology and recombinant DNA technology
 - 2. Survey of microbial agents
 - Identification and classification of prokaryotes
 - Identification and classification of relevant eukaryotes, specifically protozoa, fungi, algae, and helminths
 - Identification and classification of viruses
 - d. Viruses and cancer

 - e. prions f. The human microbiome
 - 3. Microbe host interactions
 - a. Epidemiology
 - b. Pathogenicity
 c. Innate immunity
 - d. Adaptive immunity
 - 4. Practical applications of Immunity
 - Practical applications of Immunity
 a. Immunization technology
 b. Diagnostic immunology
 5. Contemporary Infectious Diseases
 a. Skin and eye infections
 b. Respiratory system infections
 c. Nervous system infections

 - C. Nervous system infections
 Cardiovascular and lymphatic system infections
 Digestive system infections
 Infections of the urinary and reproductive systems
- B. Laboratory
 - Laboratory Fundamentals of Microbiology:
 a. Laboratory safety and procedures

 - b. Use and care of microscope
 - Observing microorganisms through a microscope
 - d. Bacterial growth

- 2. Basic Microbiology Techniques a. Preparation of media

 - b. Aseptic technique

 - c. Staining techniques
 d. Streak plate method for isolation
- e. Testing for bacteria and fungi in the environment
 Metabolic Activities for Characterization and Identification of Bacteria
 - a. Selective and differential media

 - b. Biochemical testing
 c. Anaerobic culture methods
- Rapid Diagnostics and Applied Microbiology Techniques
 a. Rapid multi-test systems, such as Enterotube II

 - b. PCR
 - c. ELISA
- 5. Bacterial Genetics
- a. Transformation
 6. Microbes and Humans
 - a. Skin microbiota
 b. Throat cultures

 - c. Oral microbiota d. Urine cultures

 - e. Gastrointestinal tract cultures
- 7. Eukaryotic Microbes
- a. Observation of clinically relevant fungi, protozoa, and parasitic helminths
 linvestigative laboratory projects

VI. METHODS OF INSTRUCTION:

- A. Research Research Group Project focusing on investigation and analysis of a Bacteriology topic, including descriptive and/or quantitative experiments.

 B. Guest Lecturers - invited guest lecturers discussing relevant applied microbiological and clinical topics

- Lecture Multimedia lecture presentations and discussion of major themes and concepts

 Audio-visual Activity Utilization of animations, TED talks, video clips, and other audio-visual aids as homework learning tools and in class discussion start points

 Readings from the text and the laboratory manual
- Student Presentations Student-led presentations on current events , clinically relevant case studies, and research findings
- Field Trips Field trips to clinical diagnostic laboratories
- H. Written exercises and case studies Selected written assignments investigating current events and relevant case studies
- I. Lab Laboratory exercises, including observations, collection and analysis of data and completion of laboratory reports

- VII. TYPICAL ASSIGNMENTS:

 A. Reading and Discussion

 1. Read about the functional anatomy of prokaryotic and eukaryotic cells in your textbook. Diagram each of the 4 possible flagellar arrangements discussed in lecture. Explain the medical importance of bacterial capsules and endospores.
 - Read the chapter on microbial diseases of the digestive system. Be prepared to compare and contrast food poisoning versus food-borne infections. Explain the implications of this distinction in how a patient would be managed clinically.
 - B. Collaborative learning
 - Work with your lab partner on "Throat Culture". Use a sterile swab to obtain an inoculum from the throat of your partner and swab a blood agar plate following the specified procedure in the lab manual.
 - 2. Form groups of three students to dramatize a chosen infectious disease that is of interest to you. One student is the patient, one student acts as the doctor and the third student plays the lab tech. In your "play", the "patient" displays all the symptoms, the "doctor" has to be able to answer questions from other class mates, and the "lab tech" explains the lab tests done and shows pictures of relevant test results. The presentation should take a maximum of 10 minutes. It should be an effective review of a given infection in order to remind ourselves of important points before the final. Since this is a drama, try to dress, look, and act the part. Do not tell the rest of the class what disease you will be enacting - they have to guess!
 - C. Writing
 - 1. Complete the laboratory report for the Throat Culture Exercise in your lab manual.
 2. Relevance Writing: Locate a current event story relating to any topic of this course in a local newspaper or in one of the big national newspapers. (Use the library web site to access any US newspaper). Cite the newspaper in which it was found (with dates and authors). Write a paragraph outlining the article. Write a second paragraph describing how this topic relates to the course as discussed in class (or described in the textbook if not yet discussed in class). This will reinforce the course content and help you on the exams. Minimum of 600 words per relevance writing.

 D. Mastering Microbiology Textbook Website
 - - 1. Prelecture Homework: Complete the prelect HW assignment for Chapter 4 online. Answer all the questions and view the assigned animations to be able to participate in the class room discussions of Chapter 4.

 2. Complete all the Test Prep assignments for Exam 2 before midnight of the day before the exam.

VIII. EVALUATION:

Methods/Frequency

- A. Exams/Tests
- B. Quizzes
- Research Projects
- D. Papers
- Oral Presentation **Projects**
- G. Group Projects
- H. Home Work
- I. Lab Activities

IX. TYPICAL TEXTS:

- Tortora, Gerard, Berdell Funke, and Christine Case. Microbiology, an Introduction. 12 ed., Pearson, 2016.
- Foster, John, Zarrintaj Aliabadi, and Joan Slonczewski. Microbiology The Human Experience. 1st ed., W. W. Norton, 2018.
 Johnson, T., & Case, C.. <u>Laboratory Experiments in Microbiology</u>. Pearson, 2015.
 <u>Mastering Microbiology for Tortora, Funke, Case.</u> Pearson, (12th).

X. OTHER MATERIALS REQUIRED OF STUDENTS:

- A. Laboratory coat
 B. Colored pencils

C. Disposable gloves
D. Packet of 50 microscope slides
E. Fine point black sharpie
