Biology 141 (INQ, WR) Cell Biology and Genetics Spring Semester 2015 Section 10A

Professor: Dr. M. Eloise Brown Carter

Office: Pierce Hall #107 (porch on south door to Pierce) Phone: (770) 784-8343

Lecture Hours: Monday, Wednesday, Friday; 10:45 a.m. – 11:50 a.m. Room: Pierce 102

Lab Hours: Monday 2:30 p.m. – 5:30 p.m. Room: Pierce 123

Office Hours: Wednesday & Friday 11:50-12:30. Students are encouraged to see Dr. Carter during class to make appointments for other times that match our schedules.

Required Texts: Campbell Biology, Reece, J.B., Urry, L.A., Cain, M.L., Wasserman, S.A., Minorsky, P.V., and Jackson, R.B. 10th edition, Benjamin/Cummings Publishing, 2014; Practicing Biology, Heitz, Jean and C. Griffen. Benjamin/Cummings Publishing Co., Inc. 2014.

Required Lab Text: SYMBOSIS: *Investigating Biology*, 8th ed. Morgan, J. G. and M. E. B. Carter.

Benjamin/Cummings Publishing Company, Inc., 2014. A customized edition published for BIO 141 is available ONLY in the bookstore. *Used lab manuals are not permitted*.

Optional Writing Book: A Student Handbook for Writing in Biology, Karin Knisely, 2013, 4th edition, W.H. Freeman and Co. This is a great resource for writing, and is also on reserve in the library.

Web Site: MasteringBiology provides online study materials, practice exams, learning activities and strategies for success. www.masteringbio.com Your text may include access to this site, if not you can purchase access.

Course Objectives: The purpose of this course is to give you, the student, a firm foundation in the underlying themes of biology. You will study living organisms, cell structure and function, genetics, and evolution. You will first develop an understanding of the chemical molecules that make up the structure of a cell and how these molecules govern cell function. Secondly, you will study the fundamentals of cell function, including transport across cell membranes and energy transformation in living cells. Thirdly, you will learn the basic mechanisms of cell reproduction, inheritance of biological traits, and processing of genetic information. You will also develop an understanding of gene transmission within populations and how genes are responsible for the evolution of populations. A fourth objective of this course is for you to use your knowledge of cellular mechanisms to understand the concepts of evolution and diversity in the biological world. Finally, a very important objective of this course is teaching you to "think and act like a scientist" through methods of scientific inquiry and the practice of deductive reasoning. Both lecture and laboratory are designed to accomplish these goals with the two components of the course integrated through study, laboratory exercises, group work, scientific writing, and individual disciplined study. Mastering these fundamental themes of biology will prepare you to further explore the more intricate and specialized areas of this field. This course fulfills the Inquiry (INQ) and Continuing Writing Requirement (WR).

BIO 141 Monday Laboratory Schedule

Spring 2015

Date		Lab Topic (#)	Writing Assignment*
Jan.	23	Scientific Investigation Materials and Methods; Title page Monday lab meets on Friday this week only (2:30-5:30)	
	26	Microscopes and Cells	Review table**
Feb.	2	Diffusion and Osmosis	Introduction; References
	9	Enzymes	Table; Figure
	13	Respiration/Fermentation Proposal posted to Blackboard by 2:30 p.m.	
	16	Cellular Respiration and Fermentation	Figure; Results; Discussion; References
	19	(Thur.) LAB EXAM (thru Enzymes) (Sign up for exams at 6:00 p.m. or 6:30 p.m.)	
	23	Mitosis and Meiosis	Comparison Table**
Mar.	2	Research Teams: Proposal Development Team Research Proposal submitted to Blackboard on Friday March 6 th by 2:30 p.m.	
9 - 13		*** SPRING BREAK ***	
	16	Field Research: Ecology and Evolution on the Outcrops	
	19	(Thur.) LAB EXAM (Mitosis and Meiosis) (Time TBA)	
	23	Microbial Diversity (Bacteriology)	Research papers due in class 4/17
	30 Research Symposium Technology Rehearsal - Upload and check your presentation at 2:30!		r presentation at 2:30!
Apr.	6	Molecular Biology	Map**
	13	Plant Diversity I & II	
	20	Bioinformatics: Molecular Phylogeny of Plants	Report completed in lab
	23 rd	(Thurs.) LAB EXAM (Bacteriology, Molecular Biology and Plant Diversity I & II) (6:00 p.m. or 6:30 p.m.)	

^{*}Writing assignments are due one week later at the beginning of the lab period unless otherwise noted.

^{**}These assignments are not turned in for a grade

Important Dates for Biology 141

(Includes lab and out of class sessions)

January	/ :	
·	26	Materials & Methods; Title page due in lab
Februa	ry:	
	5	Scientific Literature Workshop, preliminary references due (required)
	9	Introduction; References due in lab
	12	Exam I
	13	Effective Data Presentation Workshop – bring your data and laptops to class
	13	Respiration/Fermentation proposal due on Blackboard by 2:30 p.m.
	16	Results; Table; Figure due in lab
	19	Lab Exam I
	23	Figure; Results; Discussion; References due in lab
March:	5	Exam II
	6	Laboratory research project proposals due on Blackboard by 2:30 p.m.
	19	Lab Exam II
	26	Effective Presentations Workshop (2 group members must attend)
	30	Research symposium (Technology Rehearsal 2:30 p.m.)
	TBA	Advanced Literature Search Techniques - Optional
April:	9	Exam III
_	10	"Ask the Editors" session 2:30 p.m.
	15	Research paper due in class
	20	Molecular phylogeny report completed in lab
	23	lah Evam III

April:

30

Final Exam

Expectations, Evaluation and Tips for Success in Biology 141

Welcome to Biology 141! Please read carefully and follow the information in this handout and any accompanying materials. You are responsible for understanding all of the information presented here, so please ask questions if needed. Please pay attention to any changes to the syllabus as some information may be subject to change during the semester.

Introductory Biology (141) is designed for students who plan to major in biology or neuroscience and behavioral biology, attend professional school in a health related field, or have a strong background in biology and have chosen biology to fulfill their distribution requirements. This may be one of the more difficult courses you will take, demanding that you learn detailed and complex information, organize this information around conceptual themes and apply your knowledge. This knowledge will be essential to your success in other biology courses, therefore it is crucial for you to succeed in this course. Many of you will be taking examinations to enter graduate or professional schools, and the knowledge you gain here will be required for your success.

Tips for Success: Biology 141 is an intensive course and <u>requires time</u>. To perform well in this course, you must develop a proper plan for managing your time and your work, beginning from the first day of class. The following are some good study habits that will help you succeed in BIO 141:

- **Keep up with assigned readings.** The readings listed for each lecture in the syllabus must be done BEFORE the lecture. Always come to class prepared; know the fundamentals.
- Take good notes. In lecture, I will explain the most significant concepts from your readings and present images and examples that may not be in your textbook. You are responsible for all of this information. Detailed and well-organized notes are critical for studying and learning in this course. Ask questions in class to help you connect the concepts. Since some classes use inquiry, case studies, or other activities, it is important to review the class material and annotate your notes after each class. Review your notes after every lecture and before the next class.
- Sonnect the lecture notes to your readings. For the test, you are responsible for information in the textbook as well as the lecture notes. Make sure that you are able to grasp the major concepts thoroughly and in detail. Use the summary and review sections of your textbook as well as images and diagrams from your text and masteringbiology.com. In addition, connect the concepts learned in lecture to the lab exercises.
- Review material on a regular basis. Study the diagrams in your text and lecture handouts. Practice writing out pathways and linking the concepts. Use the blank figures handed out in class for your study. Attend your SI sessions on a regular basis. Studying for exams should begin at least a week in advance. Really, you are studying for the next exam —every day! Take advantage of my office hours to get individual assistance.
- Keep two things in mind. One learn terminology and most importantly, understand the relevance of that terminology to biological function. Second this course is designed to make you think and not just to have you memorize facts. Memorizing facts is important to establish a basis for your knowledge but it is not sufficient. You must be able to use your knowledge to think logically and analytically. Many of the test questions will revolve around applying your knowledge. Therefore you should be confident of what you know and what it means.
- Be an active learner. Develop study guides, comparison charts, and concept maps. Use the MasteringBiology (www.masteringbiology.com) web resources provided with your textbook. Complete assignments in Practicing Biology. Use the summary and review sections of your textbook to test your ability to apply your knowledge, take advantage of the practice exams and other resources at masteringbiology.com or use the study guide with these same materials at the library, make use of all of the handouts, and use each other to come up with practice questions. Attend Supplemental Instruction and organize your own active study group. Don't be lulled into thinking familiarity is the same as knowledge. The latter takes time and an organized plan of study.
- Lab is equally important! The laboratory component of this course is intensive and requires time as well. Please read your lab manual BEFORE lab and pay attention to the details. Take good notes and make detailed observations. Answer all questions in the lab manual either during lab or immediately following lab. Review the objectives and prepare a study guide for the lab materials and activities on a weekly basis. Learn to manage your time well and prepare in advance for the lab writing assignments. Pay attention to information about lab exams. Make use of open lab time.

<u>Supplemental Instruction.</u> SI is provided for all students in BIO 141. I will explain this important program that provides assistance for all students who wish to improve their performance in biology. The BIO 141 SI leader is *Nolan Graham* this semester.

Ways of Inquiry (INQ). Biology 141 is designated as a "Ways of Inquiry" or INQ course. In INQ courses, students "understand and question the way knowledge is sought by actively learning and practicing the discipline's approaches to inquiry" (INQ Vision Statement). In Biology 141, you will have many opportunities to engage in biological inquiry by asking questions, designing experiments, reading and writing critically, and working independently to seek knowledge.

<u>Sustainability: Life in Balance.</u> This year many members of the Oxford College community will be exploring the theme of Sustainability: Life in Balance. In this course you will have the opportunity to connect your work in cell biology, energy transformation, and laboratory investigations to this theme.

<u>Absences</u>. The policy on absences and being late to class is provided in a separate handout. Unexcused absences or a failure to follow the procedures outlined in that handout will result in a significant reduction in your grade. Any questions about absences should be asked immediately. Any questions about absences should be asked immediately. It is your responsibility to be aware of the policy.

<u>Cell Phones</u>:. The use of cell phones is strictly prohibited in the classroom and the laboratory. Please turn off your phone before you come to class and leave your phone at the front during exams. *Photography with camera phones is also prohibited in lab and lecture.*

<u>Personal Computer.</u> If you would like to take notes on your personal laptop in class you must seek special permission from the instructor. Use of laptops to surf the web, login to Facebook, Skype or other networking/chat during class is completely unacceptable.

Honor Code. All examinations and all work for credit in this course come under the regulations of the Honor Code. Your signature on your work attests to your upholding the Honor Code. Please read the information on plagiarism on the Library web page and always ask if you have any questions about assignments. Note that writing assignments will be submitted to SafeAssign on Blackboard.

<u>Office Hours.</u> I encourage you to meet with me in person about any concerns or questions that may arise during the semester. I have scheduled specific office hours but if these times are not suitable for you, please do not hesitate to make an appointment with me for a different time.

<u>Blackboard Site:</u> Blackboard will have announcements, handouts, information about Practicing Biology questions, and more! Your SI and TA will email you from Blackboard. You will upload all writing assignments on Blackboard. The syllabus and other assignments for lecture and lab will be posted on Blackboard.

<u>Additional Sessions</u>. We have two required additional instruction sessions in this course for library and information technology. These sessions are held outside of class time and are critical for your laboratory assignments.

<u>Exam Protocols.</u> Do not come to any exam with notecards or paper in your pockets or on your person. All cell phones are to be turned off and either in your bag in the front of the room or on the instructor's bench. You may **NOT have phones on your person.** Do not write notes, study material, abbreviations, or material that can be construed to be these on your body. Check for such notations and remove before the exam time. *These are considered to be a breach of the Honor Code*.

Evaluation Criteria:

Examinations - There will be three lecture exams, each worth 100 points, including multiple choice, short answer and short essay questions. Exams will cover all material in lecture in addition to assigned textbook readings and other supplemental materials. Use the knowledge you gain in lab to help with understanding the lecture material. The final examination, worth 175 points, is comprehensive. Three laboratory exams, (1st and 3rd each worth 50 points & 2rd worth 35 points), will be given in this course. Each lab exam will cover the material from the lab exercises and include a practical and a written portion.

Scientific Writing and Laboratory Project - You will write individual sections of a scientific paper for specific laboratory exercises. The lab also involves a group independent investigation as a research project. For this laboratory, you will prepare a group symposium presentation and write an individual complete scientific paper. Specific instructions will be provided in lab. This course meets the Continuing Writing Requirement (WR).

Evaluation Points: Students are evaluated on their performance in the classroom and the laboratory. The following is the distribution of points:

300 points	3 lecture exams	Final grade determination:	
135 points	3 laboratory exams	90 – 100% A	
175 points	final examination	80 – 89% B	
35 points	scientific writing	70 – 79% C	
75 points	lab project	60 – 69% D	
720 points	total	<60 F	
		Plus and minus grades are gi	ven

Absence Policy - Biology Department, Oxford College

All students are expected to attend all lecture and laboratory sessions. However, emergencies may arise which will necessitate absences from class. Students are allowed 4 cuts in lecture and NO CUTS in lab. Students may only miss lab without penalty in cases of illness, family emergency or a school-sponsored event which is cleared with the professor in advance. Students are responsible for all material which is covered in laboratory and lecture. When possible, students will be allowed to "make-up" laboratory material missed due to an excused absence; however, because of the nature of the laboratory material, actual "make-up" of missed activities is usually impossible.

PENALTIES

Students who exceed the "4-cut" limit in lecture, for whatever reason, or have an unacceptable absence from laboratory will have their final grade reduced 5 points per absence. Students who miss 2 labs without acceptable reasons will fail the course (see below).

LECTURE ABSENCES

THERE ARE NO EXCUSED ABSENCES FOR LECTURE. Each student may be absent four (4) times without penalty. These four (4) cuts may be used for any reason: illness, studying, travel, family emergency, etc. However, ANY additional cuts will result in grade reduction. USE YOUR CUTS JUDICIOUSLY, e.g., for sick leave only.

ACCEPTABLE LABORATORY ABSENCES

Although no discretionary absences, ie, "cuts," are allowed regarding laboratory exercises, on rare occasions, illness, family emergencies or certain school sponsored events may make it necessary for a student to miss a laboratory session. The instructor MUST be notified prior to the day of the absence in all but the most extreme emergencies.

In all cases, the final decision regarding whether or not an absence is acceptable will be made by the instructor.

AN UNACCEPTABLE ABSENCE FROM LABORATORY RESULTS IN A FIVE-POINT REDUCTION IN THE FINAL GRADE. TWO UNACCEPTABLE LABORATORY ABSENCES RESULT IN FAILURE OF THE COURSE.

MISSED TESTS

Ordinarily, tests cannot be made up; however, this is up to the instructor. If a student misses a test, and the absence is acceptable, the missed test will not count either for or against the student. If the absence is not excused, the grade will be a zero. Students are cautioned that any excuse for missing an exam will come under sever scrutiny by the instructor. THE INSTRUCTOR MUST BE NOTIFIED PRIOR TO THE TIME OF THE EXAM, AND THE INSTRUCTOR MAKES THE FINAL DECISION REGARDING WHETHER OR NOT AN ABSENCE IS ACCEPTABLE.

Laboratory tests which are missed for a reason that is excused MUST be made up. The instructor must be notified prior to the time of the test.

RELIGIOUS HOLIDAYS

Students must notify the instructor one week in advance if they intend to be absent for a religious holiday.

TARDINESS

Being late to class is rude and distracting. Continued tardiness by any student will result in the assignment of absences and ultimately a reduction in the student's grade. Three tardies equal an absence. The tardy student is responsible for notifying the instructor that s/he entered the classroom late and therefore was not absent. The instructor reserves the option of excluding a person from further classroom or laboratory participation if the student is continuously tardy.

Falsification of information regarding absences from class or laboratory will be considered a breach of academic integrity.

CLASSROOM AND LABORATORY GUIDELINES

Department of Biology

- Eating and drinking are not allowed in either classrooms or laboratories. Therefore, do
 not bring food items and beverages to class or laboratory. The use of tobacco in any
 form is forbidden in Pierce Hall.
- 2. Students are expected to wear appropriate attire in classrooms and laboratories. Students must wear closed toed shoes in the laboratory.
- 3. Students should thoroughly wash their hands before leaving the laboratory.
- 4. Students must be safety conscious at all times but especially in the laboratories. Special procedures will be reviewed during laboratory sessions as needed.
- All students are requested to help with housekeeping in the classroom and laboratory.
- 6. Materials may not be taken out of the laboratories. This includes microscopes, microscopic slides, demonstration notes and materials, charts, and all other items which are to be found in the laboratory.
- Students may not photograph laboratory materials.
- 8. <u>Violation of any regulation notes in Sections 6 and 7 above will be treated as a breach of academic integrity</u>. Therefore, such violations will be immediately reported to the Honor Council.
