Course Outline for BIO 1B

GENERAL ZOOLOGY

Effective: Fall 2015

I. CATALOG DESCRIPTION:

BIO 1B — GENERAL ZOOLOGY — 5.00 units

Major groups of animal phyla and heterotrophic unicellular eukaryotes. Topics include comparative structure and function, development, ecology, taxonomy, phylogeny, evolution, and behavior. Designed for majors in biological sciences and related fields. (Note: Formerly ZOOL 1.)

3.00 Units Lecture 2.00 Units Lab

Prerequisite

MATH 55 - Intermediate Algebra for STEM

MATH 55B - Intermediate Algebra for STEM B

Strongly Recommended

BIO 30 - Intro to College Biology

Grading Methods:

Letter Grade

Discipline:

	MIN
Lecture Hours:	54.00
Lab Hours:	108.00
Total Hours:	162.00

- II. NUMBER OF TIMES COURSE MAY BE TAKEN FOR CREDIT: 1
- III. PREREQUISITE AND/OR ADVISORY SKILLS:

Before entering the course a student should be able to:

- A. MATH55
- B. MATH55B

Before entering this course, it is strongly recommended that the student should be able to:

A. BIO30

- Describe and apply the scientific method and how it is used by scientists to further scientific knowledge; Cite the characteristics and levels of organization exhibited by all living organisms; Know the use of light microscope and dissecting scope.

 Describe how cells/specialized cells are structured and function;

- Describe/contrast, mitosis, and meiosis,
- 6. Describe structure, transmission and expression of genes
- 7. Explain the Darwinian concept of evolution as mounted by modern constraints.
 8. Describe how the modern (binomial) system names and classifies organisms. Explain the Darwinian concept of evolution as modified by modern scientific knowledge;

IV. MEASURABLE OBJECTIVES:

Upon completion of this course, the student should be able to:

- A. Compare and contrast characteristics of major animal taxa
- B. Explain, construct, and interpret phylogenies
 C. Summarize the phylogenetic relationships among animal taxa
- D. Explain diffusion and osmosis; explain and give examples of osmoregulation in different organisms;

 E. Give examples of physiological features among animal taxa, including digestive, respiratory, excretory systems, circulatory,

- muscular, nervous, and reroductive systems;
- F. Distinguish among and explain the structure and function of the different types of animal tissues;
- G. Identify and describe anatomical structures from representatives of different taxa, and relate the structures to their functions in digestiion, respiration, excretion, circulation, movement, nervous control, and reroduction;
- H. Compare and contrast anatomy and physiology among different taxa, including digestive, respiratory, excretory systems, circulatory, muscular, nervous, and reroductive systems;
- Compare and contrast asexual and sexual reproduction
- J. Discuss and compare developmental patterns among animal taxa and heterotrophic unicellular eukaryotes; provide examples of how development of structures is related to their evolutionary history
- Describe origin and importance of multicellularity Explain mechanisms of evolutionary change
- M. Explain the evidence for evolution

- M. Explain the evidence for evolution
 N. Explain examples of animal behavior and relate behaviors to evolutionary significance
 O. Properly use and care for compound and dissecting microscopes for microscopic examination of biological structures
 P. Apply scientific methodology and critical thinking through experimentation and experiences
 Q. Perform laboratory experiments in an efficient, safe, and purposeful manner
 R. Keep a detailed, well-organized, and comprehensive lab notebook
 S. Demonstrate proficiency with dissection and proper and safe care, use, and choice of dissection tools, including microscopic examination:
- T. Acquire, use, and properly cite scientific literature appropriately in scientific writing.
- U. Conduct a biology research project or experiment, and clearly convey the results using correct scientific format.

V. CONTENT:

- A Lecture:
 - 1. Systematics and Taxonomy

 - a. Taxonomy and classification
 b. Phylogenetic and cladisitic analysis
 c. Tree of life

 - 2. Animal tissues3. Diffusion/osmosis/osmoregulation
 - 4. Development

 - a. Comparative development
 b. Organization and regulation of development
 - Animal Taxa
 - a. Survey
 - b. Comparative Animal Body Plans
 - Comparative Animal Systems Structure
 - d. Comparative Animal Systems Function
 - e. Life Cycles
 - 6. Animal Behavior

 - a. Ethologyb. Causation
 - c. Instinctive and Learned Behavior
 - d. Behavioral ecology

 7. Diversity, phylogeny, and basic evolutionary history, and ecology of major animal taxa and relationship with heterotrophic unicellular eukaryotes
 - 8. Evolutionary concepts
 - Natural selection and mechanisms of evolutionary change
 Population genetics

 - c. Speciation and extinction
- B. Laboratory:
 1. Lab Safety

 - Experimental design
 - Microscopy
 Animal Tissues
 - 5. Phylogenetics
 - 6. Behavior
 - 7. Microscopic and macroscopic studies of live, preserved, and microscopic slides, and/or dissections (if applicable) of the major animal taxa and heterotrophic unicellular eukaryotes
 - 8. Insect collection
 - 9. Field studies

VI. METHODS OF INSTRUCTION:

- A. **Lab** 90% of lab time is hands on B. **Lecture** -
- C. Discussion
- D. Laboratory exercises
 E. Articles from scientific literature
- Field exercises
- G. Student projects
 H. **Audio-visual Activity** -
- **Guest Lecturers**
- J. Laboratory experiments

- VII. TYPICAL ASSIGNMENTS:

 A. Collect, prepare, label and reference an insect collection of 20 adult insects, with a maximum of three species per order.

 B. Properly dissect, sketch, and label an *Ascaris* worm.

 - Do an ethology for an animal.
 Compare and contrast microscopic differences and functions of epithelial tissues.

VIII. EVALUATION:

- A. Methods
- B. Frequency
 - 1. Quizzes, as appropriate; 1-3 midterms; and one final exam
 - 2. Laboratory notebook reports, as appropriate
 - 1-3 Laboratory practical examinations
 - 4. Field trip assignments, as applicable

5. 1 to 2 independent projects

- TYPICAL TEXTS:

 Miller, Stephen , and John Harley. Zoology. 9th ed., McGraw Hill, 2013.
 Hickman, Cleveland, Larry Roberts, Susan Keen, David Eisenhour, Allan Larson, and Helen l'Anson. Integrated Principles of Zoology. 14th ed., McGraw Hill, 2014.
 Hickman, C., Kats, L., Keen, S.. Laboratory Studies in Integrated Principles of Zoology.
 Perry, J., and Morton, D.. Phtoto Atlas for Biology. Brooks/Cole Cengage , 1996.

X. OTHER MATERIALS REQUIRED OF STUDENTS: A. Custom package(s) B. PPE (personal protective equipment)
