Course Outline for PSYC 4

BRAIN, MIND, AND BEHAVIOR

Effective: Fall

I. CATALOG DESCRIPTION:

PSYC 4 — BRAIN, MIND, AND BEHAVIOR — 3.00 units

Introduction to the field of biopsychology. The biopsychology of cognitive, perceptual, emotional, developmental, and social processes. Includes the biopsychology of personality, gender, emotions, learning, learning disabilities, drugs, neurological and developmental disorders, and mental health. Examination of information and theory for practical application. Strongly Recommended: Psychology 1. 3 hours lecture.

3.00 Units Lecture

Prerequisite

PSYC 1 - General Psychology

Grading Methods:

Optional

Discipline:

MIN **Lecture Hours:** 54.00 **Total Hours:** 54.00

- II. NUMBER OF TIMES COURSE MAY BE TAKEN FOR CREDIT:
- III. PREREQUISITE AND/OR ADVISORY SKILLS:

Before entering the course a student should be able to:

A. PSYC1

IV. MEASURABLE OBJECTIVES:

Upon completion of this course, the student should be able to:

- 1. describe the basic organization of the human brain and nervous system
- 2. articulate the basic roles of the major structures and regions of the brain in behavior
- 3. identify, compare and contrast the roles of the neurotransmitters in behavior
- 4. describe the basic roles of the endocrine system in human behavior

- 6. identify and describe the basic neural processes involved in drug action, drug dependence and addiction
 6. identify and describe the biopsychological processes involved in emotions, stress, cognition, and social behavior
 7. identify and describe the basic stages and processes involved in prenatal and post natal brain development, and how these processes relate to behavior

 8. identify and distinguish between the roles of the cerebral hemispheres in behavior

 9. critically analyze the biopsychology of sexual behavior, sexual orientation and gender differences

 10. describe and critically analyze the biopsychology of individual differences

- describe the basic biopsychological processes in learning
 identify and distinguish between the major categories and causes of learning disabilities
- 13. identify and describe the biopsychological processes involved in mental health disorders, such as schizophrenia, mood and anxiety disorders
- identify and describe the effects of neurological diseases, disorders, and injuries: such as strokes, Alzheimer's Disease, and Parkinson's Disease
- 15. describe and distinguish between normal and abnormal changes associated with aging

V. CONTENT:

- A. Introduction to biopsychology
 1. Overview of the field of biopsychology, including historical and contemporary approaches
 2. Critical analysis and discussion of the brain-mind relationship
- B. Methods of study in biopsychology
 - Overview of the basic scientific methodology used in biopsychology
 - 2. Thinking critically about biopsychology
- C. Organization of the nervous system
 - 1. Overview of basic brain/nervous system anatomy
 - a. Major divisions of the nervous system
 - b. Basic geography of the brain

- c. Major structures of the brain
- d. Meninges, ventricles, and cerebrospinal fluid
- D. Cells of the nervous system
 - 1. Overview of básic neuron components and glial cells
- 2. Function of each type of neuron
- E. The synapse: neuronal communication
 - 1. Overview of the processes involved in neuronal communication
- F. Neurotransmitters
 - 1. Overview of the role of the major neurotransmitters in behavior
 - 2. Role of neurotransmitters in mental health disorders
- G. Neurotransmitters and drugs
 - 1. Overview of the basic principles of drug action
 - 2. Role of the reward circuits in substance abuse

 - Neural adaptations to drugs
 Dependence and addiction
- H. The endocrine system and hormones

 1. Overview of the endocrine system
- 2. role of hormones in behavior
 I. Sensation and movement
- Organization of the motor system
 Control of muscles
 Organization of the somatosenory system

 J. Regulation of internal body states
- - Overview of homeostatic processes
 - 2. Role of the hypothalamus
- K. Cognition
 - 1. Overview of the biopsychology of cognitive processes; such as, memory, problem solving, language and intelligence
 - 2. Neural basis of consciousness
- L. Stress, emotions and motivation
 - Overview of the biopsychology of emotions, mood and motivation
 Chemical, emotional, cognitive, and behavioral effects of stress
 Psychosocial stress and mental health disorders

 - Limbic system and expression of emotions
 - 5. Prefrontal cortex and emotional behavior
- M. Sleep, dreaming and circadian rhythms
 - 1. Overview of the physiological and behavioral correlates of sleep and dreams
 - Role of biological rhythms in human behavior
- N. Cerebral hemispheres
 - 1. Overview of the roles of the cerebral hemispheres in behavior
 - 2. Critical analysis of lateralization of function
- O. The sexual brain
 - Critical analysis of the biopsychology of gender differences and sexual orientation
 Biopsychology of sexual behavior
 Role of hormones in sexual development

- Q. The malfunctioning brain
 - 1. Overview of the biopsychology of mental health problems; such as, anxiety and mood disorders and schizophrenia
 - 2. Brief overview of neuropsychological diseases and disorders; such as, autism, epilepsy, Parkinson's Disease, and Alzheimer's Disease
- 3. Brief overview of the effects of strokes and brain injuries; such as aphasia, agnosia, and neglect syndrome
 R. The biopsychology of development
 1. Overview of prenatal brain development
- - a. Critical periods and teratogens in prenatal brain development
 Overview of postnatal brain development
 - - a. Brain/behavior changes across the life span, and how these changes relate to cognitive, emotional, and behavioral changes
 - b. Role of environment in brain development
- S. Learning

 1. Overview of the biopsychology of learning

 a. Basic biopsychological processes involved in learning

 - c. Variations in learning styles
 - 2. Overview of the disorders of learning
 - a. Major learning disabilities; such as, dyslexia and attention deficit disorder, and nonverbal learning disabilities
 b. Psychosocial effects of learning disabilities
- T. Aging and the healthy brain
 - Overview of brain and behavioral changes associated with late life. A discussion of normal brain changes, and brain disorders associated with aging
 - 2. Health practices related to maintaining brain function
- VI. METHODS OF INSTRUCTION:
 - A. Lecture Lecture on major themes and concepts

 - B. Readings from texts, supplementary materials, primary source materials
 C. **Discussion** Discussion and problem solving of significant or controversial issues
 - Application of concepts to personal experiences
 - Audio-visual Activity Utilization of video and/or CD-ROM excerpts
 - Student Presentations -
 - **Demonstration** Demonstrations and simulations
 - H. Written exercises and case studies Written assignments

VII. TYPICAL ASSIGNMENTS:

A. Lecture 1. "The role of stress in the development of depression." 2. "The hierarchical control of movement." B. Reading 1. "Biopsychology of Emotion, Stress, and Mental Illness," Chapter 17, Pinel, pp. 437-465 2. "Brain Structure and Functional Organization of the Brain," Chapter 2, Kolb and Whishaw, pp. 37-72. 3. "The Individual Brain: Personality," Chapter 12, Jones, pp. 203-221 C. Class discussion of significant isolated with beattern and baseline and baseline are correlated with beattern by the function 2 D. Collaborative L. Sonia 2 D. Collaborative behavior? 2. What behavior and health practices are correlated with healthy brain function? D. Collaborative Learning 1. As

a small group project, evaluate the accuracy of information presented in Wikipedia concerning a biopsychology issue by examining other specific primary information sources. 2. Working in a small group, visit several websites related to brain development issues. Prepare a PowerPoint presentation that highlights the effect of environment on brain development. E. Writing projects 1. Research and write a term paper on the biopsychology of a specific mental health problem (e.g., depression), neurological disease (e.g., Alzheimer's Disease), or learning disability (e.g., dyslexia). 2. Critically evaluate the issues presented in "Nature, Nurture, Brains, and Behavior," Chapter 5 in Psychology 08/09 Annual Editions, and write a reaction to this topic.

VIII. EVALUATION:

A. Methods

- 1. Exams/Tests
- Quizzes
 Research Projects
- Papers
 Oral Presentation

- 6. Projects
 7. Group Projects
 8. Class Participation
 9. Final Performance
- 10. Other:
 - a. Participation in class discussions or small group projects
 - b. Research or opinion papers
 - Chapter quizzes and/or midterm examinations
 - d. Final examination
 - e. Course project or presentation

B. Frequency

- Minimum of two midterm examinations or chapter quizzes
 Minimum of one research paper and/or other short essays
- Multiple reaction/opinion papers
 Final examination, course presentation or project

IX. TYPICAL TEXTS:

- PICAL TEXTS:

 1. Kalat, J. *Biological Psychology*. 10th ed., Brooks/Cole Publishing, 2008.

 2. Jones, E. Brain *Mind and Behavior: An Introduction to Biopsychology*. 3rd ed., Pearson Custom Publishing, 2007.

 3. Pinel, J. *Biopsychology*. 7th ed., Allyn and Bacon Publishing, 2007.

 4. *Psychology 08/09, Annual Editions.*, Dushkin Publishing, 2008.

 5. Garrett, B. *Brain and Behavior: An Introduction to Biological Psychology*. 2nd ed., Sage Publications, 2009.

 6. Klein, S. *Biological Psychology*. 1st ed., Worth Publishers, 2007.

 7. Kolb, B. and Whishaw, I. *An Introduction to Brain and Behavior*. 2nd ed., Worth Publishers, 2006.

X. OTHER MATERIALS REQUIRED OF STUDENTS:
