BIOLOGY 141 (INQ, WR) CELL BIOLOGY AND GENETICS SYLLABUS

FALL SEMESTER 2014 SECTION 9A

Professor: Dr. Elizabeth Gleim **Office:** Pierce Hall #113B **Phone:** (770) 784-4745

Lecture Hours: MWF 9:30 AM – 10:35 AM **Room:** Pierce 101

Lab Hours: Tuesday 1:40 PM – 4:40 PM **Room:** Pierce 125

Office Hours: Monday 3:00-4:00 PM and Friday 10:35-11:35 AM. You may also catch me by chance or by appointment; I am generally here from 8:00 AM -5:00 PM daily. To make an appointment, see me after class or email to set up a time.

- Required Texts: Campbell Biology, Reece, J.B., Urry, L.A., Cain, M.L., Wasserman, S.A., Minorsky, P.V., and Jackson, R.B. 2011, 10th edition, Benjamin/Cummings Publishing; *Practicing Biology*, Heitz, Jean and C. Griffen. Benjamin/Cummings Publishing Co., Inc. 2011
- **Optional Writing Book (strongly encouraged):** A Student Handbook for Writing in Biology, Karen Knisely, 2005, 2nd edition, W.H. Freeman and Co. This is a great resource for writing, and is on reserve in the library.
- **Required Lab Text:** SYMBIOSIS: *Investigating Biology*, 8th ed. Morgan, J. G. and M. E. B. Carter. Benjamin/Cummings Publishing Company, Inc. 2011. A customized edition published for BIO 141 is available in the bookstore. *Used lab manuals are not permitted*.
- **Web Site:** Mastering Biology (<u>www.masteringbio.com</u>) provides online study materials; practice exams, learning activities, and strategies for success. Your text has instructions for accessing the site. See also links provided on blackboard
- Course Objectives: The purpose of this course is to give you a firm foundation in the underlying themes of biology. You will study living organisms, cell structure and function, genetics, and evolution. You will first develop an understanding of the chemical molecules that make up the structure of a cell and how these molecules govern cell function. Secondly, you will study the fundamentals of cell function, including transport across cell membranes and energy transformation in living cells. Thirdly, you will learn the basic mechanisms of cell reproduction, inheritance of biological traits, and processing of genetic information. You will also develop an understanding of gene transmission within populations and how genes are responsible for the evolution of populations. Finally, a very important objective of this course is teaching you to "think and act like a scientist" through methods of scientific inquiry and the practice of deductive reasoning. Mastering these fundamental themes of biology will prepare you to further explore the more intricate and specialized areas of this field. This course fulfills the Inquiry (INQ) and Continuing Writing Requirement (WR).

BIOLOGY 141Q FALL 2014 LECTURE SCHEDULE

<u>Date</u>		Topic Assigned Read	Assigned Reading	
۸	- 1			
<u>Augu</u> W	<u>ՏԼ</u> 27	Science as a Way of Knowing	1	
VV F	29	Major themes in Biology	1	
ı	29	Major theries in Biology	1	
Septe	<u>ember</u>			
M	1	**Labor Day** no class or lab		
W	3	Hierarchies: beginning with living chemistry and water	2,3	
F	5	Building biological macromolecules: carbohydrates and lipids	4, 5	
М	8	Proteins and nucleic acids	5	
Tu	9	Scientific Literature & Research - Library - Required 8:00 – 8:45am and 9:00 – 9.		
W	10	Structure and function revealed in cells	6	
F	12	Cell biology - Problems/Case Study		
М	15	Membrane structure and cellular transport	7	
W	17	Transport problems	,	
Th	18	Effective Presentation of Scientific Data – P206 bring your data (8-8:45 and 9-9	·45)	
F	19	Fundamentals of energy transformations: enzymes, ATP	.43)	
•	13	and electron carriers	8	
		and electron carriers	Ü	
М	22	Cellular respiration I - Glycolysis	9	
		Proposal for Cellular Respiration lab due on Blackboard by @ 9AM.		
		Bring hardcopy to class		
147	24	Cally day years ignation II. The maiting and the Knobe Cycle	0	
W	24 25	Cellular respiration II - Transition and the Krebs Cycle	9	
Th -	25 26	EXAM I 8:00 - 9:30 a.m. (through membrane transport)	.m. 0	
F	26	Cellular respiration III – Chemiosmosis and The Electron Transport Syste	:111 9	
M	29	Review and recapitulation: Accounting Day		
Octo	ber			
W	₁	Homage to photosynthesis	10	
F	3	Photosynthesis I: the light dependent reactions	10	
M	6	Photosynthesis II: the light independent reactions and variations (C4 an	d CAM)	
	10			
W	8	Development of Team Research Proposal (bring your laptop to class)		
F	10	Cell reproduction: cell cycle, mitosis	12	
		Research proposals due to Blackboard by 3 p.m.		
М	13	**FALL BREAK** no class or lab		
		2 200-2 20 100-2		

W	15	Sexual life cycles and meiosis	13
Th	16	EXAM II – 8:00 – 9:30 a.m. (through photosynthesis)	
F	17	Chromosomal mutations	15 pp. 304-307
M	20	Mendelian principles; genes and chromosomes	14; 15 p292-304
W	22	Patterns of inheritance	
F	24	Chromosomal theory and linkage	15
М	27	Genetics problems and review	
	14; 15		
W	29	DNA structure	16
Th	30	Effective Presentations Workshop - 8:00 - 8:45, 9:00 - 9:45 a.m Pi	erce 206 (optional)
F	31	DNA replication	16
<u>Nover</u>	<u>nber</u>		
M	3	Gene to Protein I: transcription and the genetic code	17
W	5	Gene to Protein II: translation and genetic mutations	17
F	7	Molecular genetics workshop	
М	10	Charles Darwin and development of evolutionary concepts	22
W	12	Evidence for evolution	22, 25 pp. 522-527; 531-538
Th	13	EXAM III - 8:00 – 9:30 a.m. (through genetics)	331 330
F	14	Population Genetics and Hardy Weinberg	23
•	Ι,	Scientific Papers – "Ask THE EDITORS" 2:30-3:30 PM P101	23
М	17	Microevolution: genetic drift, gene flow and mutation	23
W	19	Genetic variation and selection	23
F	21	Speciation	24, pp. 500-510
		Research papers due in class	
М	24	Evolution of land plants	29
W	26	**THANKSGIVING BREAK BEGINS**	
<u>Decen</u>	<u>nber</u>		
M	1	Sexual Encounters of the Floral Kind	38 pp. 815-821
W	3	Bryophytes and seedless vascular plants	29
F	5	Seed plants: gymnosperms and angiosperms	30
М	8	Evolutionary trends in land plants & Big Themes Revisited	

^{***} FINAL EXAMINATION – Wednesday, December 17th, 2-5PM ***

BIOLOGY 141 TUESDAY LABORATORY SCHEDULE

FALL 2014 DR. ELIZABETH GLEIM

All writing assignments are due at the beginning of the following week's lab unless otherwise noted.

<u>Date</u>		Lab Topic	Writing Assignment	
Sept.	2	Scientific Investigation Refere	Title page; Introduction; ences Cited (due 17 th in lab)	
	9	Microscopes and Cells	Review table ⁺	
	16	Materials and Methods oard by Mon, Sep 22 nd @ 9AM.		
	23	Enzymes	Results, Table, Figure; Discussion; References Cited	
	30	Cellular Respiration	No assignment	
Oct.	2 nd	(Thur.) LAB EXAM I (thru Enzymes) (Sign up for exams at 6:00 PM or 6:30 PM)		
	7	Mitosis and Meiosis Research Proposals submitted to Blackboard ON FR	Comparison Table [†] FRIDAY, Oct. 10th by 3 PM.	
	14	**FALL BREAK**		
	21	Field Research: Ecology and Evolution on the Outcrops		
23 rd (Thur.) LAB EXAM II (Respiration, Mito		(Thur.) LAB EXAM II (Respiration, Mitosis & Meios	sis) (6:00 PM or 6:30 PM)	

	28	Microbial Diversity (Bacteriology)	Research papers due in class 11/22	
Nov.	4	Research Symposium (Technology Rehearsal –2:30 Pierce 101)		
	11	Molecular Biology	Map ⁺	
	18	Plant Diversity I & II	Comparison Tables ⁺	
25 **No Lab this week due to THANKS		**No Lab this week due to THANKSGIVING BF	SGIVING BREAK **	
Dec.	2	Bioinformatics: Molecular Phylogeny of Plants	s Report completed in lab	
	4 th (Thurs.)	LAB EXAM (Molecular Biology and Plant Dive	ersity I & II) (6:00 PM or 6:30 PM)	
[†] These assignments are not turned in for a grade.				

IMPORTANT DATES FOR BIOLOGY 141 (INCLUDES LAB AND OUT OF CLASS SESSIONS)

September:

- 9 Scientific Literature workshop (required) meet in the Library
- 16 Title page, Introduction; References Cited due in lab
- 18 Effective data presentation workshop bring your data P206
- 22 Cellular respiration proposal due in Blackboard by 9AM, submit hard copy in class
- 23 Materials and Methods due in lab
- 25 Exam I
- 30 Results, Table, Figure; Discussion; References Cited due in lab

October:

- 2 Lab Exam I
- Research Development Proposal identify your team and bring your laptop to class
- 10 Laboratory research project proposals due on Blackboard by 3 p.m.
- 16 Exam II
- 23 Lab Exam II
- 30 Effective presentations workshop (2 group members must attend)

November:

- 4 Research symposium (*Technology Rehearsal at 2:30*)
- 13 Exam III
- 14 "Ask the Experts" session
- 21 Research paper due in class

December:

- 2 Molecular phylogeny report completed in lab
- 4 Lab Exam III
- 17 Final Exam

Expectations, Evaluation and Tips for Success in Biology 141

Welcome to Biology 141! Please read carefully and follow the information in this handout and any accompanying materials. You are responsible for understanding all of the information presented here, so please ask questions if needed. Please pay attention to any changes to the syllabus as some information may be subject to change during the semester.

Introductory Biology (141) is designed for students who plan to major in biology or neuroscience and behavioral biology (NBB), attend professional school in a health related field, or have a strong background in biology and have chosen biology to fulfill their distribution requirements. This may be one of the more difficult courses you will take, as you will be expected to go beyond simple memorization of biological concepts and mechanisms, but have a strong enough grasp and understanding of these concepts and mechanisms to apply and think critically about them---in short, you will begin the process of learning how to think like a scientist. The material you learn in this course and the shift in thinking about science critically will serve as a foundation for the rest of your course work in biology and beyond; because of this, it is critical that you succeed in this course. Many of you in the future will be applying for summer jobs and internships and further down the line taking examinations to enter graduate or professional schools and/or applying for jobs in science and the knowledge and skills you gain here will be required for your success.

Tips for Success: Biology 141 is an intensive course and <u>requires time</u>. To perform well in this course, you must develop a proper plan for managing your time and your work, beginning from the first day of class. The following are some good study habits that will help you succeed in BIO 141:

- **Keep up with assigned readings.** The readings listed for each lecture in the syllabus must be done BEFORE the lecture.
 - O How to Read Effectively: Take the time to summarize what you read in your own roads in the form of notes that can later be used to study. This will help cement in your mind what you've read while also allowing you to determine any questions you might have which you are encouraged to ask in or outside of class. Finally, look at the figures! They aren't just there to take up space and for many people can be more helpful than the text.
- **Take good notes.** I cannot stress this enough! In lecture, I will explain the most significant concepts from your readings and present images and examples that may not be in your textbook. You are responsible for all of this information. I strongly recommend taking notes on the printed power points that I provide so that they correlate to specific slides. This will help you significantly when studying and also prevents you from the temptation of simply writing down what is already given to you on the slide. Review your notes frequently.
 - If I say "write this down" or "this is important"---write it down. Even if you think you'll remember that and don't need to write it down...write it down and put a star by it! That information may very well re-visit you ©
- Monnect the lecture notes to your readings. For the test, you are responsible for information in the textbook as well as the power points and lecture notes. Make sure that you are able to grasp and connect major concepts thoroughly and in detail.

- Review material on a regular basis. Study the diagrams in your text and lecture handouts. Practice writing out pathways and linking the concepts. Use the blank figures handed out in class for your study.
- Do the worksheets and check your answers. You will be given many ungraded worksheets throughout the semester. These worksheets are a way for you to practice applying your knowledge and critical thinking skills and it is almost guaranteed that you will see these types of questions on exams. Be sure to check your answers to ensure that you are learning correctly. Answer sheets are available on Blackboard for all handouts. If you are struggling with a particular worksheet or question: 1) Attend SI sessions, handouts are almost always covered 2) Check answers and/or work on the handouts in a study group, or 3) Come see me and we can work through things together.
- Take advantage of your resources: Attend SI on a regular basis, attend open labs, and take advantage of my office hours to get individual assistance, I am always happy to help.
- **Keep two things in mind**. One <u>learn terminology</u> and most importantly, understand the relevance of that terminology to biological function. Second this course is <u>designed to make you think</u> and not just to have you memorize facts. Memorizing facts is important to establish a basis for your knowledge but it is not sufficient. You must also be able to use your knowledge to think logically and analytically and this takes practice just like memorizing concepts does!
- Lab is equally important! Please read your lab manual BEFORE lab and pay attention to the details. During lab, take good notes and make detailed observations---drawings can often be helpful. Always ask yourself, have I taken thorough enough notes that if I revisit these in a few weeks, I will remember and understand why I did what I did? Answer all questions in the lab manual either during lab or immediately following lab. Review the objectives and prepare a study guide for the lab materials and activities on a weekly basis.

<u>Supplemental Instruction.</u> SI is provided for all students in BIO 141. I will explain this important program that provides assistance for all students who wish to improve their performance in biology. The BIO 141 SI leader for this section is **Parth Shah**.

<u>Ways of Inquiry (INQ)</u>. Biology 141 is designated as a "Ways of Inquiry" or INQ course. In INQ courses, students "understand and question the way knowledge is sought by actively learning and practicing the discipline's approaches to inquiry" (INQ Vision Statement). In Biology 141, you will have many opportunities to engage in biological inquiry by asking questions, designing experiments, reading and writing critically, and working independently to seek knowledge.

<u>Absences</u>. Your attendance in this class is crucial to your success in this course. Not only will you receive information in class that is not necessarily available in your text or even in the power points, but this is a highly participatory course in which we often have discussions and have individual as well as group in-class exercises. Please see the absence policy that is handed out separately from this syllabus.

<u>Cell Phones:</u> The use of cell phones (texting, ringing, etc.) is strictly prohibited in the classroom and the laboratory. Please turn off your phone before you come to class (or just don't bring it!) and leave your phone at the front during exams. If you feel that you have a legitimate need to use your phone or leave the ringer on, please speak to me *before* class. *Photography with camera phones is also prohibited in lab and lecture.*

<u>Personal Computer.</u> If you would like to take notes on your personal laptop in class you must seek special permission from the instructor. Use of laptops to surf the web, login to Facebook, Skype or other networking/chat during class is completely unacceptable and may result in you losing your privilege to use a laptop if you did have prior permission.

<u>Honor Code</u>. All examinations and all work for credit in this course come under the regulations of the Honor Code. Your signature on your work attests to your upholding the Honor Code. Please read the information on **plagiarism** on the Library web page and always ask if you have any questions about assignments. Note that writing assignments will be submitted to **SafeAssign on Blackboard**.

<u>Office Hours.</u> I would like to encourage you to meet with me in person about any concerns or questions that may arise during the semester. I want you to succeed in this course and am here to help in whatever capacity that I can. I have scheduled specific office hours but if these times are not suitable for you, please do not hesitate to make an appointment with me for a different time.

<u>Blackboard Site:</u> Blackboard will have announcements, handouts, information about Practicing Biology questions, and more! Myself, your SI and TA will all email you from Blackboard so do be sure that you are set-up to receive these messages. You will upload all writing assignments on Blackboard. The syllabus and other assignments for lecture and lab will be posted on Blackboard.

<u>Additional Sessions.</u> We have two required additional instruction sessions in this course for library and information technology. These sessions are held outside of class time and are critical for your laboratory assignments.

Exam Protocols. Any item/s you bring to class with you the day of an exam must be left at the front of the room. This includes but is not limited to backpacks, folders, notecards, coats, and cell phones (which must be turned off). Do not come to any exam with notecards in your pockets or on your person. No hats or hoodies can be worn while taking an exam. All cell phones must be left on silent either in your bag in the front of the room or on the instructor's bench. Do not write notes, study material, abbreviations, or material that can be construed to be these on your body. Check for such notations and remove before the exam time. These are considered to be a breach of the Honor Code.

Evaluation Criteria:

Examinations - There will be three lecture exams, each worth 100 points, including multiple choice, matching, short answer and short essay questions. Exams will cover all material in lecture in addition to assigned textbook readings and other supplemental materials. The final examination, worth 175 points, is comprehensive. Three laboratory exams, the first is worth 35 pts and the 2nd and 3rd each worth 50 points, will be given in this course. Each lab exam covers

topics covered in lab as well as *all* material in your lab manual. The lab exams will include a practical and a written portion.

Scientific Writing and Laboratory Project - You will write individual sections of a scientific paper for specific laboratory exercises. The lab also involves a group independent investigation as a research project. For this laboratory, you will prepare a group symposium presentation and write an individual complete scientific paper. Specific instructions will be provided in lab. This course meets the Continuing Writing Requirement (WR).

Evaluation Points: Students are evaluated on their performance in the classroom and the laboratory. The following is the distribution of points:

300 points	3 lecture exams	Final grade (determination:
135 points	3 laboratory exams	90 – 100%	Α
175 points	final examination	80 – 89%	В
35 points	scientific writing	70 – 79%	C
75 points	lab project	60 – 69%	D
720 points	total	<60	F
		Plus and mir	nus grades are given

The instructor reserves the right to adjust dates and topics on lecture and lab syllabi if she determines it is necessary.
